

ResultManager

ChartConnect ResultManager provides a workflow solution that brings your outside documents into a result-management tool, connecting physicians with their laboratory, radiology, hospital partners, and even other community providers. The secure, online application enables providers and staff to receive, act on, and manage a patient-centric record of results, reports, referrals and consults.

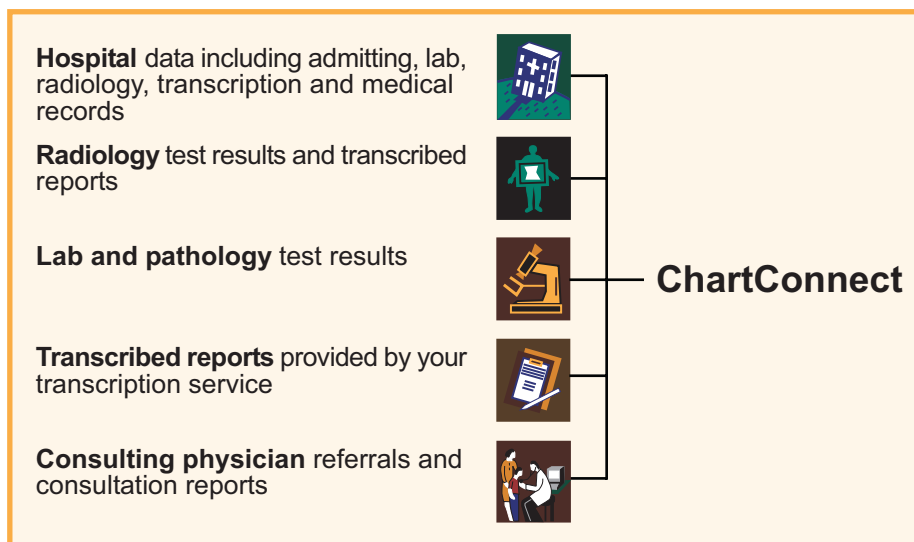

With **ResultManager**, physicians and their staff can:

- Electronically view messages and reports including patient demographics, face sheets, lab results, radiology reports and transcribed reports.
- Sign off on laboratory results, radiology reports and transcribed reports.
- Securely route reports and results to staff and providers within the organization or to *any* other provider organizations regardless of whether they subscribe to ChartConnect or not. All activity on results and reports is documented and saved in the patient's electronic record.
- Exchange secure electronic messages with others within your organization or with other provider organizations that subscribe to ChartConnect.
- Electronically send records, while maintaining "Patient Release of Information Document" solution meeting HIPAA requirements.
- Add non-interfaced documents to a patient's record using our fax server and/or scanner services.
- Allow other providers in the community to view individual patient records (for ER, call sharing, and consultations).
- Upgrade to a full Electronic Medical Record.

Streamline your office by managing all of your incoming documents – both inpatient and outpatient – with ChartConnect ResultManager. With this easy-to-use online application you are on your way to creating an electronic patient record system that is accessible anytime, anywhere.
